## World's Most Comfortable Bed?

The world's most comfortable bed? I can't say I've had the pleasure of getting a good night's sleep on one, but a company called Ammique <<http://www.ammique.com/main.html>> claims it is the first to offer "long term, consistent comfort, total hygiene and much more..."

No small claims, but considering the cheapest bed I could find on their web site was about £14,000 pounds, you would expect them to make such statements.

The main support for your body is in essence a non mattress, being a very complex network of interconnected beams and rods, capped with thousands of plastic domes to support the body. It sounds rather harsh but all testimonials point to the contrary, with people saying they have never experienced such restful sleep. As the bed contains no foam or fabric, it's also totally free of dust mites and other nasties, which is great for allergy sufferers. I don't know about you, but I so want one of these.
